*Speculum Perspicuum Uranicum*

Or, An

# ALMANACK

For the

Year of Christ 1676.

Being the Bissextile or Leap-Year;

And from the Creation of the World 5625 years.

Since the Death of our Saviour 1643 years.

Since the Conquest of *William* Duke of  
*Normandy* 610 years.

Since the Flood of *Noah* 3969 years.

Since *LONDON* was Built 2783 years.

Since the Restauration of King *Charles II.* 16 years.

Since *London* was Burned 10 years.

Since *London* was Re-built.

Wherein is contained

A true Description of the Year, and of the several parts thereof, according to the *English* and *Foreign* Account, with necessary Tables and Observations of worth, with a just account of such Eclipses as will happen this Year.

Calculated

For the Meridian of the Ancient and Famous City of *London*, whose Latitude is 51 degrees and 32 minutes and may serve without sensible error for any part of *England*.

Collected and Published by

LANCELOT COELSON,

*Student in Astrology and Physick,*

Eaſter Term begins April 12, ends May 8. and hath 5 Returns, Quindeno Paſchæ, Menſe Paſchæ, Quinque Paſchæ, Tres Paſchæ, Craſtino Aſcenſionis.

Trinity Term begins May 26, ends June 14. and hath 4 Returns, Craſtino Trinitatis, Octabis Trinitatis, Quindeno Trinitatis, Tres Trinitatis.

Michaelmas Term begins October 23, ends November 28, and hath 6 Returns, Tres Michaelis, Menſe Michaelis, Craſtino Animarum, Craſtino Martini, Octabis Martini, Quindeno Mart.

Would men be juſt, on Terms we need not ſtand,

But live in Love and Peace throughout the Land :

Now Law with Tricks of Knaves is ſo beſet,

The Suit proves worſe, than loſing of the debt.

Hang't, hang't, refer the Caſe, and ceaſe your fury,

Two Friends will do as well as Judge and Jury.

# Coelson, 1676.

## The Regal Table.

Kings & Q. Names	Born a. no	Began to Reign.	Reigned Y.	Since their M. Rei. ended.	Buried at
William 1	1023	1066. Octob. 14	20	11588. Sept. 9	Caen. Norm.
William 2	1057	1057. Septem. 9	12	11575. Aug. 2	Winchester.
Henry 1	1066	1100. August. 2	35	4540 Dec. 1	Reding
Stephen	1105	1135. Decem 1	18	11521. Oct. 25	Faversham.

## The Saxon Line Restored.

## The Union of the two Kingdoms.

James	1566	1602. March. 24	22	00051. Mar. 27	Westminster.
Charles 1	1600	1625. March. 27	23	11028. Jan. 30	Windsor.
Charles 2	1630	1648. Jan. 30	Whom God grant long to Reign.		

Great CHARLES, our six and twentieth Monarch Reigns,

Since Conquering William mounted Britains Throne,

Happy that Nation such a Prince obtains

Whose Vertues well as Birth, deserve a Crown;

Under his Conduct may we long remain,

And may he then an heavenly Kingdom gain.

# Coelson, 1676.

A Table shewing the time of the Moons coming to the South, and quantity of her shining.

The Moons Age.		Moons Southing and shining.		The Moons Age for her shining.	
1	16	0	48	1	29
2	17	1	36	2	28
3	18	2	24	3	27
4	19	3	12	4	26
5	20	4	0	5	25
6	21	4	48	6	24
7	22	5	36	7	23
8	23	6	24	8	22
9	24	7	12	9	21
10	25	8	0	10	20
11	26	8	48	11	19
12	27	9	36	12	18
13	28	10	24	13	17
14	29	11	12	14	16
15	30	12	0	15	

## The Use of the Table.

First find the Moons age in the first Column, and next against the same, towards the right hand, is the time of her coming to the South, which from the New Moon to the Full Moon, is always in the afternoon, but from the Full Moon to the New Moon, it is always in the morning.

### Example :

The fifth day of May this year 1676. the Moon is 3 days old, which I find in the first Column, against which towards the right hand in the second Column I find 2 24. so that being before the Full M. I conclude the Moon cometh to the South at 24 min. past 2 of the clock afternoon. To

## Coellon, 1676.

To find how long the Moon shineth, and what time she Riseth and Serteth.

For the Moons shining, enter the third Column with the Moons age, and against the same towards the left hand, is the time of her shining, which all the time of her increase being added to the hour of the Suns rising, which you will find in its true place, it will give the time of the Moons rising; but if the same quantity be added to the time of the Sun setting, it will give the time of the Moons setting, if after the Full Moon, take the quantity of her shining from the Suns rising, and you shall have the Moons rising; and if you take the same from the Sun setting, it gives the time of the Moons setting.

## Example.

The fifth day of *May* before mentioned, the Moon is 3 days old, which I find in the third Column, in the first row descending, and against the same I find in the second column 2 h. 24 min. for the time of her shining, which being added to the time of the Sun rising 4 h. 12 min. it giveth the time of the Moons rising at 6 h. 36 min. that is, viz. the Moon riseth at 36 min. past 6 in the morning.

Again, to the time of the Sun setting 7 h. 48 m. I add the time of her shining 2 h. 24 min. and the aggregate is 10 h. 12 min. for the time of her setting that night, viz. the Moon sets that night at 12 min. past 10. and so of any other day or night, when you desire to know the rising or setting of the Moon.

This is as near the truth as can be obtained from any common Rule, however these serving for the memory, will often come very near to the truth, and may be very profitable where better helps are wanting.

In time, when encouraged, God blessing me with life and health, I may present thee with another methodical way, more exact to the truth than can be obtained by this or any other common rule.

# Coelson, 1676.

	100	10	0	0	30	0	0	60	0	0	90	0	0	120	0

In these three Tables you have the Interest due upon any sum of money, from a shilling to 100 l., over the head of the Table is the denomination of the time; under that, over the head of the common Angles, are the letters [l] signifying pounds, [s] shillings, [p] pence, [f] farthings.

*Gallants beware. 'tis not your Interest sure,  
Such sums on Interest daily to procure;  
'Tis a vile Cancer in a fair Estate,  
And eats whole Mannors at a mighty rate.  
Keep punctually your Credit from abuse,  
But have a care of paying use on use.*

## Coellon, 1676.

A Table of Expence, which at the first view  
is easie to the meanest Capacity, there-  
fore needs no example to unfold it.

	e	min. after 5				

On the 14 day, S. Valentine, Priest. suffered Martyrdom under Claudius the Emperor, for not worshipping the heathen Gods, Anno 271. first being bearen with staves, then afterwards be-headed; men and women (as taught by the custom of birds.) to chuse their friendly mates, do present them presents, some think [this] Valentine was the Author of the fancy.

On the 3 d. is mentioned the invention of the H. Cr. Cathol. writers say, That on this d. Christ himself with the Cross appeared, in such manner as he was Crucified at Jerusalem for the sins of Mankind, it being instituted on that day by the the Church An. 326. If this were true, it deserves double Honour.

On the 4 day is mentioned Erasmus, but should have been on the 3 day, on which day Erasm. with others was, by Maximianus, partner to Dioclesian, as well in his cruelties as power, put to death for professing the faith of Christ, having been strangely tortured before, An 196. Erasmus was a Bishop in Campania.

On the 28 day is mentioned Innocents, on which day Herod commanded all young Children to be slain, hoping thereby to have murdered our Saviour. In this massacre his own son was killed, for which the Noble Emperor Augustus Caesar fixed this ironical Proverb on him, That it were better be Herods Swine, than his Son.

## A plain and easie Rule for the Moons Rising and Setting.

At the New Moon she riseth and setteth with the Sun,  
 At the Full Moon she riseth when the Sun sets,  
 At the beginning of the Increase, she riseth after Sun  
 rising, and sets after Sun sets,  
 At the beginning of the Decrease she rises a little af-  
 ter Sun set, and sets a little before his rising,  
 In the first Quarter of her Increase, she riseth about  
 noon, and sets about midnight.  
 In the second Quarter of her Decrease, she riseth at  
 midnight, and sets about noon.  
 And hence you may compute near enough for com-  
 mon use, the time of the Moons rising and setting,  
 only observe, she riseth every day slower, than on  
 the other, by about 48 minutes,

*Thus as the Moon seems Empress of the night,  
 Yet shines not, but with a Sun-borrowed Light;  
 So though vain man, seem to do or will,  
 He owes all to Divine Assistance still.*

## ALMANACK

For the Year of our Lord God

1676.

Being the ~~Third after Bissextile~~ or *Leap-Year*

Wherein you have an account of such  
Eclipses as will happen this Year.

With several necessary Tables, and other  
Things Worthy to be observed, Useful for all  
sorts of People.

LIKEWISE,

Some brief Predictions of the state of the Year  
upon the Sun's Entrance into *ARIES*.

AS ALSO,

A Chronography of the 4 Quarters of the Year

---

*Collected, Composed, and Published,*

By LANCELOT COELSON,  
*Student in ASTROLOGY and PHYSICK.*

---

L O N D O N.

Printed for the Company of Stationers, 1676.

## Coelson 1676.

Of the Eclipses that will happen this year 1676.

**T**Here will be conspicuous to the habitable world Two Eclipses, and both of the Sun.

The first Eclipse of the Sun happens on June 1st. at our 10 of the Clock in the morn. and will be visible to us; It will be celebrated in 21 Degr. of  $\Pi$ , in the 11th Angle of the Heavens [as to us] and the Ascendant of LONDON: It will appear total about the Hesperides or Canary Islands; and will be seen also to such as inhabit Greenland, or that navigate in the North sea; Likewise in Hispaniola, Cuba, &c. and in several other places, but not in all places alike.

The second Eclipse of the sun happens on Nov. 25. about our 8 a Clock in the morning; if the weather prove fair we in England may behold the defect, by reason the sun rises to us eclipsed; this eclipse will be visible also in the Kingdoms of Bissara, Benin, in New Guinea, Madagascar, Virginia, and also in the Æthiopick Ocean, &c. and many other places.

In this year also will be celebrated a notable Conjunction of Saturn and Mars, with the Pleiades, or that Constellation vulgarly called the 7 Stars, it happens on the 15 day of July, and may be seen a little after midnight in the East parts of the Heavens, and perhaps the Trine of Jupiter & Venus, which happens that evening, may occasion a good and clear Air for the purpose, though it may not last long.

Of

410

## Coellon 1676:

### Of the Four Quarters of the Year.

**T**He Spring takes his beginning when the sun toucheth the first scruple of Aries, which happens this year March 9, 10 min. past 4 afternoon, who by his glorious appearance makes the earth to smile, coming to revive what frowning winter had almost destroyed. This season is by nature hot and moist, the most temperate time of the year; a very convenient time to take Physick, to unburthen nature of all such humours as do oppress her, either by Purging, Bleeding, or otherways as occasion shall permit. This Quarter the body of Man is incident more than at other times, to Feavers, Jaundies, Impostumes, swellings, Quinsseys, Boils, Itch, Pusshes, Pox, Bleeding at Nose, spotted Feaver, and such other Diseases occasioned by the quantity or quality of blood.

### Of the Summer Quarter.

**T**His Quarter takes its beginning when the Sun toucheth the first scruple of the Tropical sign of Cancer, causing longest day and shortest night to all on this side the Æquator, which this year happens on the 10 of June 37 min. past 7 at night,

This season by nature is hot and dry, causing the humours of man to be suitable to his own nature, fatts Cattle, and brings all Fruits to ripeness, increasing the rich mans store, and maketh the earth fat with the bodies of Men, Women, and Children, by reason of those so many Diseases now subject to nature, (viz.) Burning Feavers, Phrenies, Inflammations, Imposthumes, Ulcerations of the Lungs & Bladder, heat in the Reins, the Gonorrhea, Iliack Passon, and such Diseases which proceed from Cholar.

C The

## Coellon 1676.

### *The Autumn Quarter.*

**T**Akes his beginning when the Sun toucheth the first scruple of the sign Libra, which happens this year, September the 12<sup>th</sup>. about ten in the morning.

This season is very variable and unconstant causing warm dayes but cold nights, and the body of man incident to bad diseases as at any time of the year, (*wz.*) Fistulaes, Fluxes, Hemorroides, Dysenteries, pain of the back, side, and stomach, occasioned by wind, pains in the Reins, stone, suppression, palsies, convulsions, madness and distraction, occasioned by melancholy, obstruction of the spleen, and such diseases thereby occasioned.

### *The Winter Quarter.*

**T**Akes his beginning when the Sun toucheth the first scruple of the Tropick of Capricorn, causing shortest days and longest nights, to all on this side the Æquator, and is a great Antagonist to the Spring, a destroyer of the fruitful Harvest, and a disgrace to Summer, which happens this year December the 10<sup>th</sup>. 49. minuts, past 9. at night.

This season is by nature, cold and moist, no great pleasure to the weary Traveller, and causeth many obstructions in the bodies of old People, and others who are incident to receive colds, coughs, rhumes, palsies, posies, cramps, convulsions, vertiges, epilepsies, apoplexies, cholicks, hoarseness, fluxes, pain in the teeth, noise in the ears, agues of all sorts.

*See how the Springs fresh Beauties do decay,  
Sun-burnt by Summers more robustious Ray;*

*De-*

412

*Declining Autumn next succeeds, and then  
 We'r wrapt in hoary Winters arm agen:  
 So blooming Youth by Man-hood is o're ta'ne,  
 And Man-hood struggles with Old age in vain;  
 There's nothing stable, various Scenes obtrude,  
 And all the World's but a vicissitude.*

Sol enters Cancer *June 10th.* 37 m. past 7 at night.

Sol enters Libra *Sept. 11th.* at 10 in the morning.

Sol enters Capricorn *Decem. 10th* 49 m. past 9 at night.

By the Revolutions of the years of the World, is known what will ensue in this year, whether good or ill, peace or war, plenty or scarcity; also the state and condition of all sorts and degrees of men in general.

In this Vernal Figure the earthy Sign *Virgo* ascends the Horoscope, and that part thereof which all Astrologers account the face or decanate of the Sun, *Prima facies est solis & est seminandi & orandi Herbanum populationem congregandi; divitias & dirigendi victum suum; Haly de Jud. Astro. lcl. 4.* The first face of *Virgo* is of the Sun, and is a face

## Coelſon 1676.

of ſowing, Plowing, Planting Herbs, Peopling, gathering together Riches and food; If ſo, then we may expect a fortunate year in the general, which I pray God may prove ſo; But in reſpect the Sun and ♀ are poſited in the 8 Houſe, and ♂ their Diſpoſitor in ☐ to the Moon Lady of the 11, we may very well fear we ſhall in ſome meaſure fail of our hopes and expectations.

We have divers Rules and Examples left to us as Presidents by the Antieuts how to judge of general accidents or Mundain affairs, & thereby to inform the world what may probably occur to mortals, according to the natural & ſecondary cauſes.

The Scheme it ſelf in general, promiſes well to the Learned Clergy and Lawyers; nor is the induſtrious Merchant to be exempted, who is alſo promiſed a conſiderable ſhare of ſucceſs and proſperity in his affairs, the ☾ and ♀ in the 9. well affected and befriended of Jupit. though weak, notwithstanding the preſence of ♄ therein, whoſe influence may eclipse but not extinguish the promiſed good, Ireland will alſo ſhare in the effects of thoſe Influences; ♂ in ♊ a human ſign, menaces ſome Countries remote from England, as Muſcovia, Tartaria, Swedeland, Weſtphalia, Bavaria, &c. ♄ his poſition in the 9. which is the Houſe of Sea Voyages and long Journeys, ſhews ſome Shipwrack may caſually happen, but not much to the detriment of ſuch perſons as venture their eſtates in that kind; ſo alſo may ſome ſmall prejudice occur to the learned Clergy, and Diviſions or controversies may ariſe in point of Religion, which I  
hope

hope may soon be settled by the prudence of the Magistrate who by the presence of Cauda Draconis in the Mid-heaven, may not escape malicious censures; ♄ in the 6 is always the Prodimus of many diseases to ensue, occasioned from corrupted blood, [viz.] Surfeits, Ebriety, and other intemperances carelessly minded by the sons of men; the same Position portends danger to the lesser kind of Cattle also; and further intimates, that servants this year will be too much prone to injure and wrong their Masters; a caution for Masters to be more than ordinary careful to prevent such fraudulent actions; Jupit. in the 5th. signifies men will very much prosecute their pleasures and delights, and women will not only be more pregnant, but more happy in bringing forth children, and with less danger than in some former years, and Mercury Lord of the ascendant in γ the dignity of Mars, and worthy of the Angle of Honour in □ to Jupiter Lord of the 7th. in the dignity of ♄, may also shew contests and unreasonable debates between man & man, under the presence of Justice; But Mercury being in \* with ♄ his dispositor, doth mitigate the matter, and may hasten such controversies to a sudden conclusion; but such disturbances may happen more particularly in such countreys as are supposed to be under the sign ♄, as Russia, Polonia, Sweden, Ireland, and divers other Countreys, which may take share of the conjunction of ♄ & Jupiter in July 15. happening in the constellation which governs them.

## Coelſon 1676.

Having given good ſatisfaction in my laſt years Almanack to many, in publiſhing the nature and cauſes of Eclipſes, I thought it not amiſs to continue it this Year alſo:

The Eclipse of the Sun is cauſed by the direct interpoſition of the opacous body of the Moon between the Sun and us, which never happens; but at the time of the *Novi-lunium*, or New Moon; and yet not in every New Moon, but then only when the Moon hath little or no latitude from the Ecliptick line; ſo that the Sun loſeth no light; but only ſome part of the Earth is deprived of his glorious luſtre, by the interpoſition of the body of the Moon between him and their ſight: Hence Aſtronomers define, that it is *Interceptio luminis Solaris proſecta, ex interpoſitione Lune inter Solem atque aſpectum noſtrum*; ſo that *Suidas* well obſerves, that *Solis eclipſis fit, quando Luna in ipſum incurrit*: Therefore it follows, that the Sun may be totally Eclipsed to ſome People, whiſt others living remote (yet at the ſame time enjoying the Suns preſence) may ſee the greateſt obſcurity not to exceed half his body: As in the Eclipse of the Sun that is to happen the 2. of July 1684. which will be nine years hence, the greateſt obſcurity at Rome will be 12. Digits, in England not above 8. Digits, and in Ireland little above 6. Digits; a'l which diverſity in the *Phænomena*, ariſeth from the great and various changes of the Moons parallax, in Altitude, Longitude and Latitude, of which you may ſee further in Mr. *Vincent Wings*  
Aſtro+

Astronomical Treatises, to which I refer you. But the Eclipse of the Moon is universal, and appears in all places of the same quantity and continuance, for the Moon being (as before said) an opacous body, and having no light but what she receives from the Sun, can never be Eclipsed, or lose the Suns light, but at the full Moon, when she hath little or no latitude, but is diametrically opposite to the Sun, and the Earth interposing between them (*recta in linea*) casting her shadow upon the Moon, and thereby depriving her of the Suns light, which may be more or less, according to the Moons latitude: Hence the Philosopher rightly defineth this defect, that it is *Privatio luminis in Luna, orta a diametrali terræ inter Solem & Lunam oppositione*, so that it is to be observed, that in the Solar Eclipse, the Moon (by her proper motion from West to East) first enters upon the West Limb of the Sun, so the Suns Eclipse doth alwayes begin on the West-side, and end on the East: But the contrary appears in the Lunar Eclipse, for her motion being from West to East, the East part of her body must necessarily first enter the Earths shadow, and so her Eclipse alwayes begins on the East-side, and ends on the West.

*A small Tract how to judge of what weather may ensue by those Signes following.*

**I**F the Sun at the time of his rising seem greater in the East then commonly appeareth, it shews there are many vapours, which will bring rain.

## Coelson 1676.

If in the West about Sun-setting there appeareth a thick black Cloud, it either sheweth rain that night, or the day following, because that cloud will want heat to disperse it.

If a black Cloud be in the East, in which the Sun soon after his rising is hid, it will dissolve it, and rain will ensue that day; or if Vapours are seen to ascend upon it, it is a certain sign of raine.

If the Sun or Moon look pale, look for raine; if fair and bright, faire weather; but if red, winds, as the Verse hath it:

*Pallida Luna pluit, rubicunda flat, alla serenat.*

If the Sky be red in the morning, it is a signe of wind and raine, or both, because those Vapours which cause the redness will presently be resolved into rain; but if the sky be red in the evening, it is a token of a fair night to ensue.

If Mists come down from the Hills, or seem to descend from the Heavens, and settle in the Vallies, it presageth hot weather; Mists in the Evening portend a hot day to ensue; the same when white Mists arise from the waters in the evening.

The re-sounding of the sea upon the shore, and the murmur of winds in the woods, without apparent winds, shew wind to follow, for such winds breathing chiefly out of the earth are not quickly perceived.

The often changing of the wind doth many times shew stormy weather.

When there is no dew at such times as usually there is, it fore-sheweth raine, because the matter of the dew is turned into watry clouds. If

If in the North-west before day-light end, there appears a company of little small black Clouds like flocks of sheep, it is a certain signe of raine.

If the wind continue any considerable time in the South, it is a certain signe of raine.

If the Sun at his rising be encompassed with a Circle, and drive away the clouds before him westward, it signifies fair weather.

The obscuring of the smaller Stars in a clear night is a signe of raine.

The shooting of the Stars shew wind from that coast the star came.

If the Summer be moist and cloudy, it's bad for Corn and Fruit.

If the Rain-bow appear when it is fair, it is a signe of foul weather; the same if two Rain-bows appear: A rain-bow presently after rain shews fair weather, if it be very green, rain; if red, winds; if it be seen in the morning, it shews moisture; in the evening fair weather: but you are to observe there are two sorts of Rain-bows, one of the Sun, another of the Moon; that of the Sun appearing by day, and that of the Moon by night, and more seldom than that of the Sun.

If the Moon the Fourth day after her Change have a Circle or hollow about her, winds and rain; a Circle about her neer the full Moon, sheweth winds from that part that the circle is most splendid and bright; if her horn at her rising shew more gross and thick than ordinary, expect store of rain suddenly to ensue.

## Coelson 1676:

If the Stars appear bright, blazing, and bigger then ordinary, great winds & moisture in the part where they appear; In Winter frost and cold. If dim Stars appear with tails, it shews wind and drought, and the more, the greater.

If in the Winter-time the sky be full of Stars, and the wind Eastward, look for hard frost; but in Summer heat. If the Stars seem few, and cast little light, change of weather. If they seem to run, shoot or fall, wind from that part, and tempestuous weather.

Water-fowls. (as Sea-gulls, More-hens, &c.) when they gather together in flocks and companies, and fly from the sea towards the shore; and contrariwise, Land-birds, (as Crows, Swallows, &c.) when they fly from the Land to the waters, and beat the waters with their wings, foreshew wind and rain, Aches, Hurts, and Corns in men full of rain; predicts frost or rain. Solid bodies, as walls, stones, and pavements, when they sweat, so also Earth-worms come forth, Moles cast up more then ordinary, and Fleas, Flyes, and Gnats bite more then ordinary, is sign of rain. The falling of soot from Chimneys, Cattel eating greedily and licking their hoofs, croaking of Frogs, the creeking of wainscoat, Plaister falling from walls, if the fire hush and keep a noise, or burn pale, if the Spinner work hastily in the Air, the Aunt busied with her eggs, or the Bees in fair weather not going far from home, all these are signs of foul weather to follow.

Winter-birds, (as wood-cocks, Feld-fares, &c.) if they come sooner then ordinary, and out of the Northern Countreys, do (with us) shew cold winter.

So the Swallow and Cuckoo that come toward Summer, if they come early, shew a hot summer to follow.

Great store of Haws and Heps, do commonly portend hard and frosty winters.

*A most Useful TABLE, shewing the Bearing, Distance and Height of the Pole of the Chiefest Cities and Towns of England, from the Famous City of LONDON.*

## The Use of the Preceding Table.

**T**He Table is divided into 3 Columns, and each of them again divided into 2 Columns, whereof the 1st. contains the price of the l. and in the 2d. the price of the C. and is very useful for all such as buy or sell by retail, or otherwise deal by the gross C. for if you have the price of the l. against it in the right hand Column you have the price of the C. and if you have the price of the C. against it in the left hand Column you have the price of the l. as near as may be.

## Example.

If a Commodity be sold for 7 d. the l. seek 7 d. in the 1st. Column, and against it toward the right hand, you shall have 3 l. 5 s; 8 d. and if the pound be 15 pence half penny, on the right hand column you shall have 7 l. 4 s. and 8 d. so if a commodity cost 9 l. 16 s. the C. seek 9 l. 16 s. in the right hand column; and on the left hand thereof you shall have 21 d. or if it cost 5 l. 16 s. & 8 d. there will answer upon the left thereof 12 d. half penny; and so of any other price whatsoever; Observe where you have 1, 2 & 3 in the Column of farthings, it signifies 1 farthing, 2 farthings, 3 farthings

You'r welcom Readers now my work is done,  
The year is ending where it first begun :

If Printers faults, or mine, you chance to spie,  
Read them with spectacles of Charity.

I plainly write to serve my Countrey friend,  
If he be pleas'd I reach my wish'd for end.

Courteous

## Coelson 1676.

*Courteous Reader.*

**I**T hath pleased God since the writing of my last Almanack, that I received a very sad accident, by breaking a legg, upon which it was very much reported abroad, both in City and Country that I was dead of the said hurt.

These are therefore to advertize the world, that I am, I praise God, well recovered to my former health, and am ready as formerly, at home, to attend any that shall have any occasion from 7. in the morning, till one or two afternoon: For deafness I have a present Remedy, if curable; and I have an excellent Powder, which kills all sorts of worms; and an incomparable Antiscorbutick Pill, which perfectly cures the scurvey, and any other diseases complicated therewith, if not too far gone, they cure any Venereal distemper, if not too much radicated, and cures all pains in the head, back, stomach, and sides; In short they purge all putrified humors, and preserve the body from corruption, so long as nature can be preserved in that quality: You may also be furnished with that great Antidote of *Van Helmont, Paracelsus, and Crollius*, by them called *Elixir proprietatis*; the greatest Cordial, and only Medicine in the world for long and sound life, restoring nature even at the point of death, and effectually taking away the seeds of all diseases, with directions in print as to its use, and particular virtues: The price one ounce, at 4. s. and half an ounce 2. s. in Glasses weighed ready to any that come or send.

From my House at the sign of the Royal Oak in the Still-yard upon Great Tower-hill. between the sign of the Red Cow, and the Gun Tavern, July the 8th 1675.

28 OCT 62
